

ADAM TAREK ELADWY

DATA ANALYST

+201016385770 | adamtarek1809@gmail.com | Tanta, Egypt | ad1809.github.io/My_Portfolio

PROFESSIONAL SUMMARY

Results-driven Data Analyst with hands-on experience in end-to-end ETL pipeline design, data cleaning, and business intelligence reporting. Expert in Power BI dashboard development, DAX measures, and star-schema data modeling. Proficient in Python (Pandas, NumPy) for data wrangling, EDA, and automation, and SQL for data extraction and transformation. Proven ability to build scalable data pipelines and deliver stakeholder-ready reporting across e-commerce, retail, and HR domains. Currently pursuing a B.A. in Information Technology at Tanta University.

PROJECTS

E-Commerce Performance Dashboard

Power BI | Jan 2026 – Feb 2026

- Designed and implemented an end-to-end ETL data pipeline — from raw data ingestion and cleaning through transformation and loading — to feed a fully interactive Power BI Business Intelligence dashboard.
- Engineered advanced DAX measures and star-schema data models to automate performance tracking of sales revenue, delivery KPIs, and cancellation rates across multiple product lines.
- Applied rigorous data cleaning and validation routines to ensure data integrity and analytical accuracy before stakeholder reporting.
- Delivered stakeholder-ready visual reporting that identified high-revenue SKUs and underperforming channels, directly supporting executive decision-making.

Sales Performance Analysis & Dashboard

Microsoft Excel | Misuo Furniture | Nov 2025 – Dec 2025

- Executed a full data cleaning and ETL workflow — cleaning, validating, and transforming raw sales data into a structured, analysis-ready dataset using Power Query.
- Designed a multi-KPI Business Intelligence dashboard in Excel to monitor revenue trends, product performance, and category-level distribution.
- Produced automated KPI summaries for stakeholder reporting, reducing manual effort and improving decision speed.
- Uncovered top-performing products and seasonal sales patterns, providing clear optimization opportunities for management.

HR Analytics & Employee Attrition Dashboard

Python + Power BI | Feb 2026 – Mar 2026

- Built a Python-based data pipeline using Pandas & NumPy to clean, transform, and run exploratory data analysis (EDA) on 1,400+ HR employee records — a complete ETL workflow from raw data to analytics-ready output.
- Engineered a relational data model in Power BI with DAX measures to calculate attrition rates, average tenure, and department-level headcount trends as part of a Business Intelligence solution.
- Delivered an interactive stakeholder reporting dashboard enabling HR teams to filter attrition by department, salary band, age group, and job role — eliminating manual HR reporting overhead.
- Identified that employees in overtime roles with low satisfaction scores had a 3x higher attrition rate, providing HR leadership with a targeted, data-driven retention strategy.

TECHNICAL SKILLS

Business Intelligence & Visualization: Power BI (Advanced), Tableau (Foundational), Excel Dashboards

ETL & Data Pipelines: ETL Pipeline Design, Data Cleaning, Data Wrangling, Power Query, Automation

Data Modeling: Star Schema, Relationships, Data Architecture, DAX (Calculated Columns, Measures, Time Intelligence)

Programming & Querying: Python — Pandas, NumPy, EDA (Intermediate); SQL — Joins, Aggregations, Subqueries (Intermediate)

Reporting: Stakeholder Reporting, Executive Dashboards, KPI Summaries

Excel: Pivot Tables, Power Query, Advanced Formulas, Dashboards (Expert)

EDUCATION

Bachelor of Arts — Information Technology
Tanta University, Egypt

Aug 2025 – Present

LANGUAGES

Arabic — Native Speaker | **English** — Fluent (Professional)

Available for freelance, part-time, or full-time Data Analyst roles • Open to remote work
